LSD USE IN THE UNITED STATES

LSD use in the United States was on a slight decline betweeen 1999 and 2000 amongst people ages 18-25.

Percentage of People Age 18-25 Reporting LSD Use, 1999-2000 National Household Survey on Drug Abuse

LONG TERM EFFECTS OF LSD

The long-term effects of LSD are known as "FLASHBACKS".

- Flashbacks are spontaneous, unpredictable recurrences of the LSD experience without the ingestion of more of the drug.
- There are three types of flashbacks:
 - Emotional
 - > Somatic
 - Perceptual

FLASHBACKS

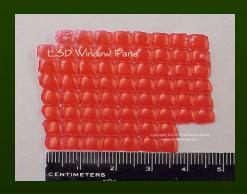

- Emotional Flashbacks- The most dangerous type, brings back feelings of fear, depression, and anxiety. Reminds the user of a "bad trip".
- Somatic Flashbacks- This type of flashback alters sensations of the body that are associated with the original "trip", i.e. tremors, dizziness and nausea.
- Perceptual Flashbacks- Perceptual flashbacks consist of the sensory

LSD TESTING IN THE ARMY

- LSD is detectable in urine for 1-3 days.
- The Army tests for LSD on a rotational schedule.
